

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

Brown Thrasher, Barn Swallow, Chimney Swift, Kingbird, Baltimore Oriole, Wood Thrush, Scarlet Tanager, Rose-breasted Grosbeak, Redstart, Ruby-throated Hummingbird, Bob-white, Goldfinch, Blue Jay, Brown Creeper, Butcher Bird, Golden-crowned Kinglet, Herring Gull, and Chickadee.

The excellence of the drawings, although not here published for the first time, is a sufficient *raison d'être* for the book; their fidelity to nature and delicacy of touch will render 'Bird Portraits' a never failing source of pleasure. The accompanying text by Mr. Hoffmann consists of brief well written biographies of each subject, giving the characteristics of the birds portrayed. While not sufficiently comprehensive to serve as a manual of the birds of any particular locality, the work is one that will prove a favorite with all nature lovers who can appreciate birds and art. — J. A. A.

Gould's 'Louis Agassiz.'¹ — Although not especially an ornithologist, Louis Agassiz, the great naturalist and the great teacher, has an interest and charm for all students of nature. In this little volume of 150 small pages we have an admirably condensed account of his life,— brief, authentic and fascinating. Although of Europe by birth, he was an American by adoption. Apropos of this, the author says: "The most valuable legacies of scientific men are left to the whole world, with no restraint of place and little of time. But there are a few gifts which they leave, as other men leave them, to one country or to one community. And whatever in Agassiz's gift was necessarily thus restricted we find to-day in America, not in Europe. At Cambridge stands his Museum; at twenty places on our coasts are the summer schools which have succeeded to his Penikese; and in the American world is the transmitted enthusiasm which passes from teacher to scholar,— the fire that may light up a whole generation which has forgotten the source where it was kindled."

At the present time when summer schools and marine laboratories for teachers are taken as a matter of course, it may be well to recall the fact that the first of the series was that established by Agassiz on the Island of Penikese in 1872. Agassiz's method of teaching natural history was not through books nor by memorizing the observations of others, but by direct appeal to nature and the cultivation of the powers of observation. This method was an innovation, and a most happy one, as the work of the students trained under his direction has abundantly demonstrated. The general public, and especially all lovers of nature, should feel indebted to Miss Gould for her excellent epitome of the life of the great teacher. — J. A. A.
